ssh hostname aliasing

- In ~/.ssh

ssh hostname aliasing

- In ~/.ssh
    - Create / edit a file named `config` (no extension)

ssh hostname aliasing

- In ~/.ssh
    - Create / edit a file named `config` (no extension)
    - Add to ~/.ssh/config:

ssh hostname aliasing

- In ~/.ssh
  - Create / edit a file named `config` (no extension)
  - Add to ~/.ssh/config:

```
Host eos01
```

ssh hostname aliasing

- In ~/.ssh
  - Create / edit a file named `config` (no extension)
  - Add to ~/.ssh/config:

```
Host eos01
Hostname eos01.cis.gvsu.edu
```

ssh hostname aliasing

- In ~/.ssh
  - Create / edit a file named `config` (no extension)
  - Add to ~/.ssh/config:

```
Host eos01
Hostname eos01.cis.gvsu.edu
User exampleusername
```

ssh hostname aliasing

- In ~/.ssh
  - Create / edit a file named `config` (no extension)
  - Add to ~/.ssh/config:

```
Host eos01
Hostname eos01.cis.gvsu.edu
User exampleusername
```

- How to use?
  - Simple! Type: `ssh eos01`

ssh keys 🔑🔑

Idea: how to verify users with files on their system?

ssh keys 🔑🔑

Idea: how to verify users with files on their system?

We leverage public/private key encryption!

Using ssh keys

1. Generate the keys
    a. `ssh-keygen`
2. Share the public key
    a. `ssh-copy-id -i path_to_key username@server`

Common issues with ssh keys

- Errors with `authorized_keys` file
    - Make sure the file exists: `touch ~/.ssh/authorized_keys`
    - Wrong permissions
        - `chmod 600 ~/.ssh/authorized_keys`
        - `chmod 700 ~/.ssh`
- If you have `ssh` and `ssh-keygen` but not `ssh-copy-id`
    - We can manually copy the key and add it to the file
        - `scp ~/.ssh/id_rsa.pub username@hostname:~`
        - Login to server via ssh
        - `cat id_rsa.pub >> ~/.ssh/authorized_keys`

Common issues continued

If ssh is still asking for a password, try running these two lines:

```
eval $(ssh-agent -s)
ssh-add PATH_TO_YOUR_PRIVATE_KEY
```

If that works, you can add them to your ~/.bashrc file to automate it! .bashrc runs every time you start your terminal
