

bonus linux tips and tricks

These scenarios are available here:

https://github.com/ferguson-gvsu/cis_241_w_2026/tree/main/in_class_examples/linux_trick_examples

Scenario 1

Imagine you run 1s

Scenario 1

Imagine you run `ls` this is what you see:

```
another_directory  
its_really_hard_to_come_up_with_long_directory_names  
this_is_a_directory  
you_think_this_name_is_outrageously_long_but_i_have_seen_
```

Scenario 1

Imagine you run `ls` this is what you see:

```
another_directory  
its_really_hard_to_come_up_with_long_directory_names  
this_is_a_directory  
you_think_this_name_is_outrageously_long_but_i_have_seen_
```

Imagine we want to `cd` into the "you_think_..." dir

What if we're lazy?

Scenario 1

Imagine you run `ls` this is what you see:

```
another_directory  
its_really_hard_to_come_up_with_long_directory_names  
this_is_a_directory  
you_think_this_name_is_outrageously_long_but_i_have_seen_
```

Imagine we want to `cd` into the "you_think_..." dir

What if we're lazy?

Start typing...

`cd you`

Scenario 1

Imagine you run `ls` this is what you see:

```
another_directory  
its_really_hard_to_come_up_with_long_directory_names  
this_is_a_directory  
you_think_this_name_is_outrageously_long_but_i_have_seen_
```

Imagine we want to `cd` into the "you_think_..." dir

What if we're lazy?

Start typing...

`cd you`

Then hit **tab**!

Scenario 1

Imagine you run `ls` this is what you see:

```
another_directory  
its_really_hard_to_come_up_with_long_directory_names  
this_is_a_directory  
you_think_this_name_is_outrageously_long_but_i_have_seen_
```

Imagine we want to `cd` into the "you_think_..." dir

What if we're lazy?

Start typing...

`cd you`

Then hit **tab**!

Tab is a context-sensitive autocomplete in bash!

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one
```

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one
```

You start typing: `cd a`

Then hit tab

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one
```

You start typing: `cd a`

Then hit tab

Nothing happens!

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one
```

You start typing: `cd a`

Then hit tab

Nothing happens!

It's ambiguous what you want to autocomplete!

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

You start typing: `cd a`

Then hit tab

Nothing happens!

It's ambiguous what you want to autocomplete!

Tab will not continue when there is uncertainty!

(also you can hit tab again to see options)

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Only one option that starts with `a_`

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Only one option that starts with `a_`

If you type `cd an` and hit tab, it will *partially* autocomplete

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Only one option that starts with `a_`

If you type `cd an` and hit tab, it will *partially* autocomplete

```
cd another_
```

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Only one option that starts with `a_`

If you type `cd an` and hit tab, it will *partially* autocomplete

```
cd another_
```

It's now unclear what you want.

Scenario 2

Similar setup, you run `ls`:

```
a_directory  another_directory  another_one  b_directory
```

If you type `cd a_` and hit tab, it will autocomplete!

Only one option that starts with `a_`

If you type `cd an` and hit tab, it will *partially* autocomplete

```
cd another_
```

It's now unclear what you want.

Type one more letter (d or o) and you can autocomplete fully!

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Just hit the up arrow key!

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Just hit the up arrow key!

This brings back your last command.

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Just hit the up arrow key!

This brings back your last command.

- If you need to edit it, use arrow keys to move left/right

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Just hit the up arrow key!

This brings back your last command.

- If you need to edit it, use arrow keys to move left/right
- You can use the home key to jump to the beginning
 - ctrl + a if you don't have a home key

Scenario 3

Imagine you type a long command:

```
ssh username@eos11.gvsu.edu
```

Oh no! We had a typo

Don't re-type the whole thing!

Just hit the up arrow key!

This brings back your last command.

- If you need to edit it, use arrow keys to move left/right
- You can use the home key to jump to the beginning
 - ctrl + a if you don't have a home key
- Hitting up multiple times will go back further in your history
 - Down arrow will move forward again

Scenario 4

Imagine you're in one directory and then you `cd` somewhere else on your system

Scenario 4

Imagine you're in one directory and then you `cd` somewhere else on your system

But you forgot to do something! How do you get back?

Scenario 4

Imagine you're in one directory and then you `cd` somewhere else on your system

But you forgot to do something! How do you get back?

Simple:

`cd -`

Scenario 4

Imagine you're in one directory and then you `cd` somewhere else on your system

But you forgot to do something! How do you get back?

Simple:

`cd -`

This is like a back button, but it only works for one step!
